**MEDIA INFORMATION  
FOR IMMEDIATE RELEASE**

**Shui On Building Contractors  
Arrangement for Installation of Water Filters for  
Kwai Luen Estate Phase 2**

(Hong Kong, 11 August 2015) Shui On Building Contractors Limited (the “Company”) has been highly concerned about the excessive lead content found in drinking water samples of Kwai Luen Estate Phase 2. As the main contractor of the Estate, the Company has been cooperating fully with the government departments concerned in the investigation and follow-up measures. At the present stage the Company is installing a temporary water supply system by providing downpipes to each floor directly from the roof water tank of the building in Kwai Luen Estate Phase 2. The works are scheduled to complete by end of August.

To expedite the installation of water filters for the residents concerned, the Company has purchased water filters from overseas which are certified by the National Sanitation Foundation to NSF 53 Standard as an effective device in reducing lead content in drinking water. The Company will arrange technicians to commence installation for each household at Kwai Luen Estate Phase 2 starting from 13 August 2015, and it is anticipated that the installation for the total 1,507 residential units will take about one week. The Company will also be responsible for filter replacements in the first two years.

The Company is sorry for the inconvenience caused by the incident to the residents, and hope that the above arrangements would help relieving the impact on the residents.
